

## **INFOST 490 - Senior Capstone Team Web Page (Extra Credit)**

### **Assignment**

In the beginning of the semester, students were working on their individual Web pages using Shared Web Content via a BitBucket repository. That same repository has now been updated to include Web pages for each team. Team Web Pages have already been generated with template text in place of the actual content regarding the team and its project. Your assignment is to fill in real content about your team and project. I have already populated the Web page for Demonstration Team. You should use this example as your content and style guide.

### **Expectations**

Submissions will be graded based upon completeness and technique. All submissions must include a link for the System Demo Video. Please see the grading rubric for this assignment in the Weekly Schedule.

### **Extra Credit**

This is an optional team deliverable. Those teams that submit their Team Web Page by the deadline will earn up to 5 extra credit points. These team points will be distributed to the team members based upon the same rules that apply to the other team deliverables.

### **Submission**

Your team page will be considered submitted when:

1. The changes to your Team Page have been pushed to the remote repository.
2. You have submitted a short document to the dropbox to let us know that your Team Web Page is ready for grading.

### **Deadline**

Please consult the Weekly Schedule for the date and time deadline.
